Global Education for Innovation and Leadership (GLP-GEFIL)

Department of Fundamental Engineering

<http://www.glp.u-tokyo.ac.jp/en/>

In cooperation with the Global Education for Innovation and Leadership (GEFIL) program at the University of Tokyo, the lab's activity focuses on training a new generation of global leaders that will play a leading role in the future society. The training program focuses on developing relevant knowledge of actual global issues and on fostering practical skills such as teamwork management, communication, and multidisciplinary research skills, which are essential to any leader working in an international environment.

The program accepts applications from second-year undergraduate students across all faculties every year. Students interested in global issues and international experience are encouraged to apply.
