Quantum nanophysics and its device applications

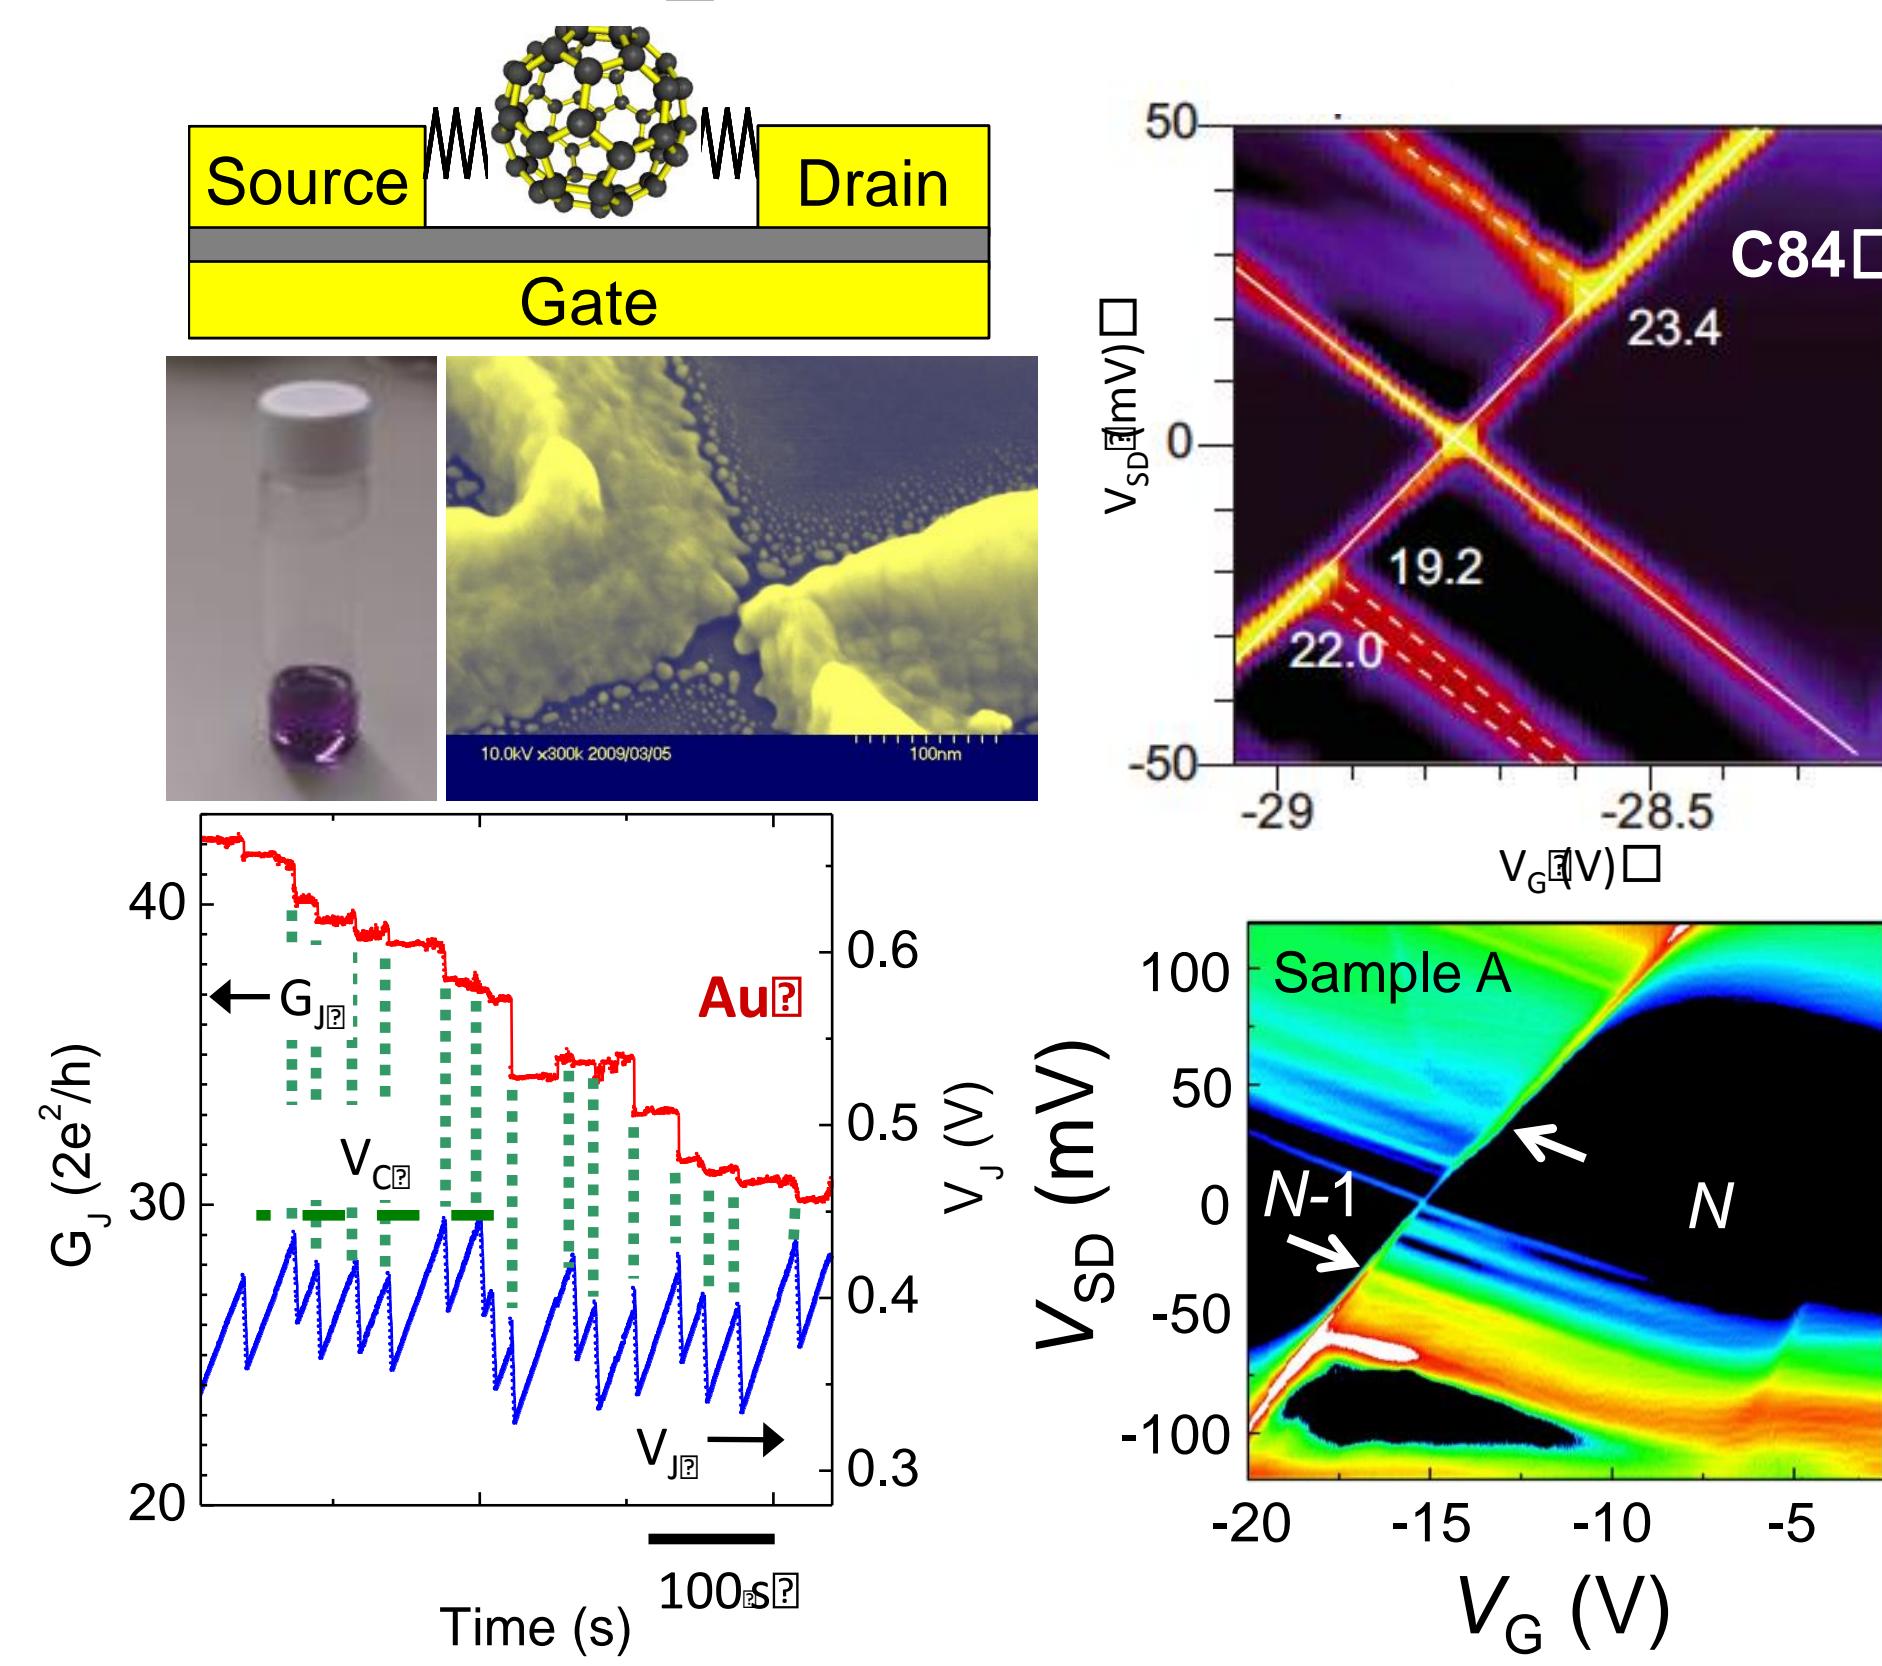

Various intriguing physics shows up in quantum nanostructures owing to size quantization and electron-electron interaction effects. We investigate novel physics in such quantum nanostructures and explore their device applications.

- Carrier dynamics and device applications of quantum nanostructures in the THz range
- Physics and applications of single quantum dot transistors
- Nanoscience for single molecular transistors
- Molecular beam epitaxy of semiconductor quantum structures and nanofabrication technologies

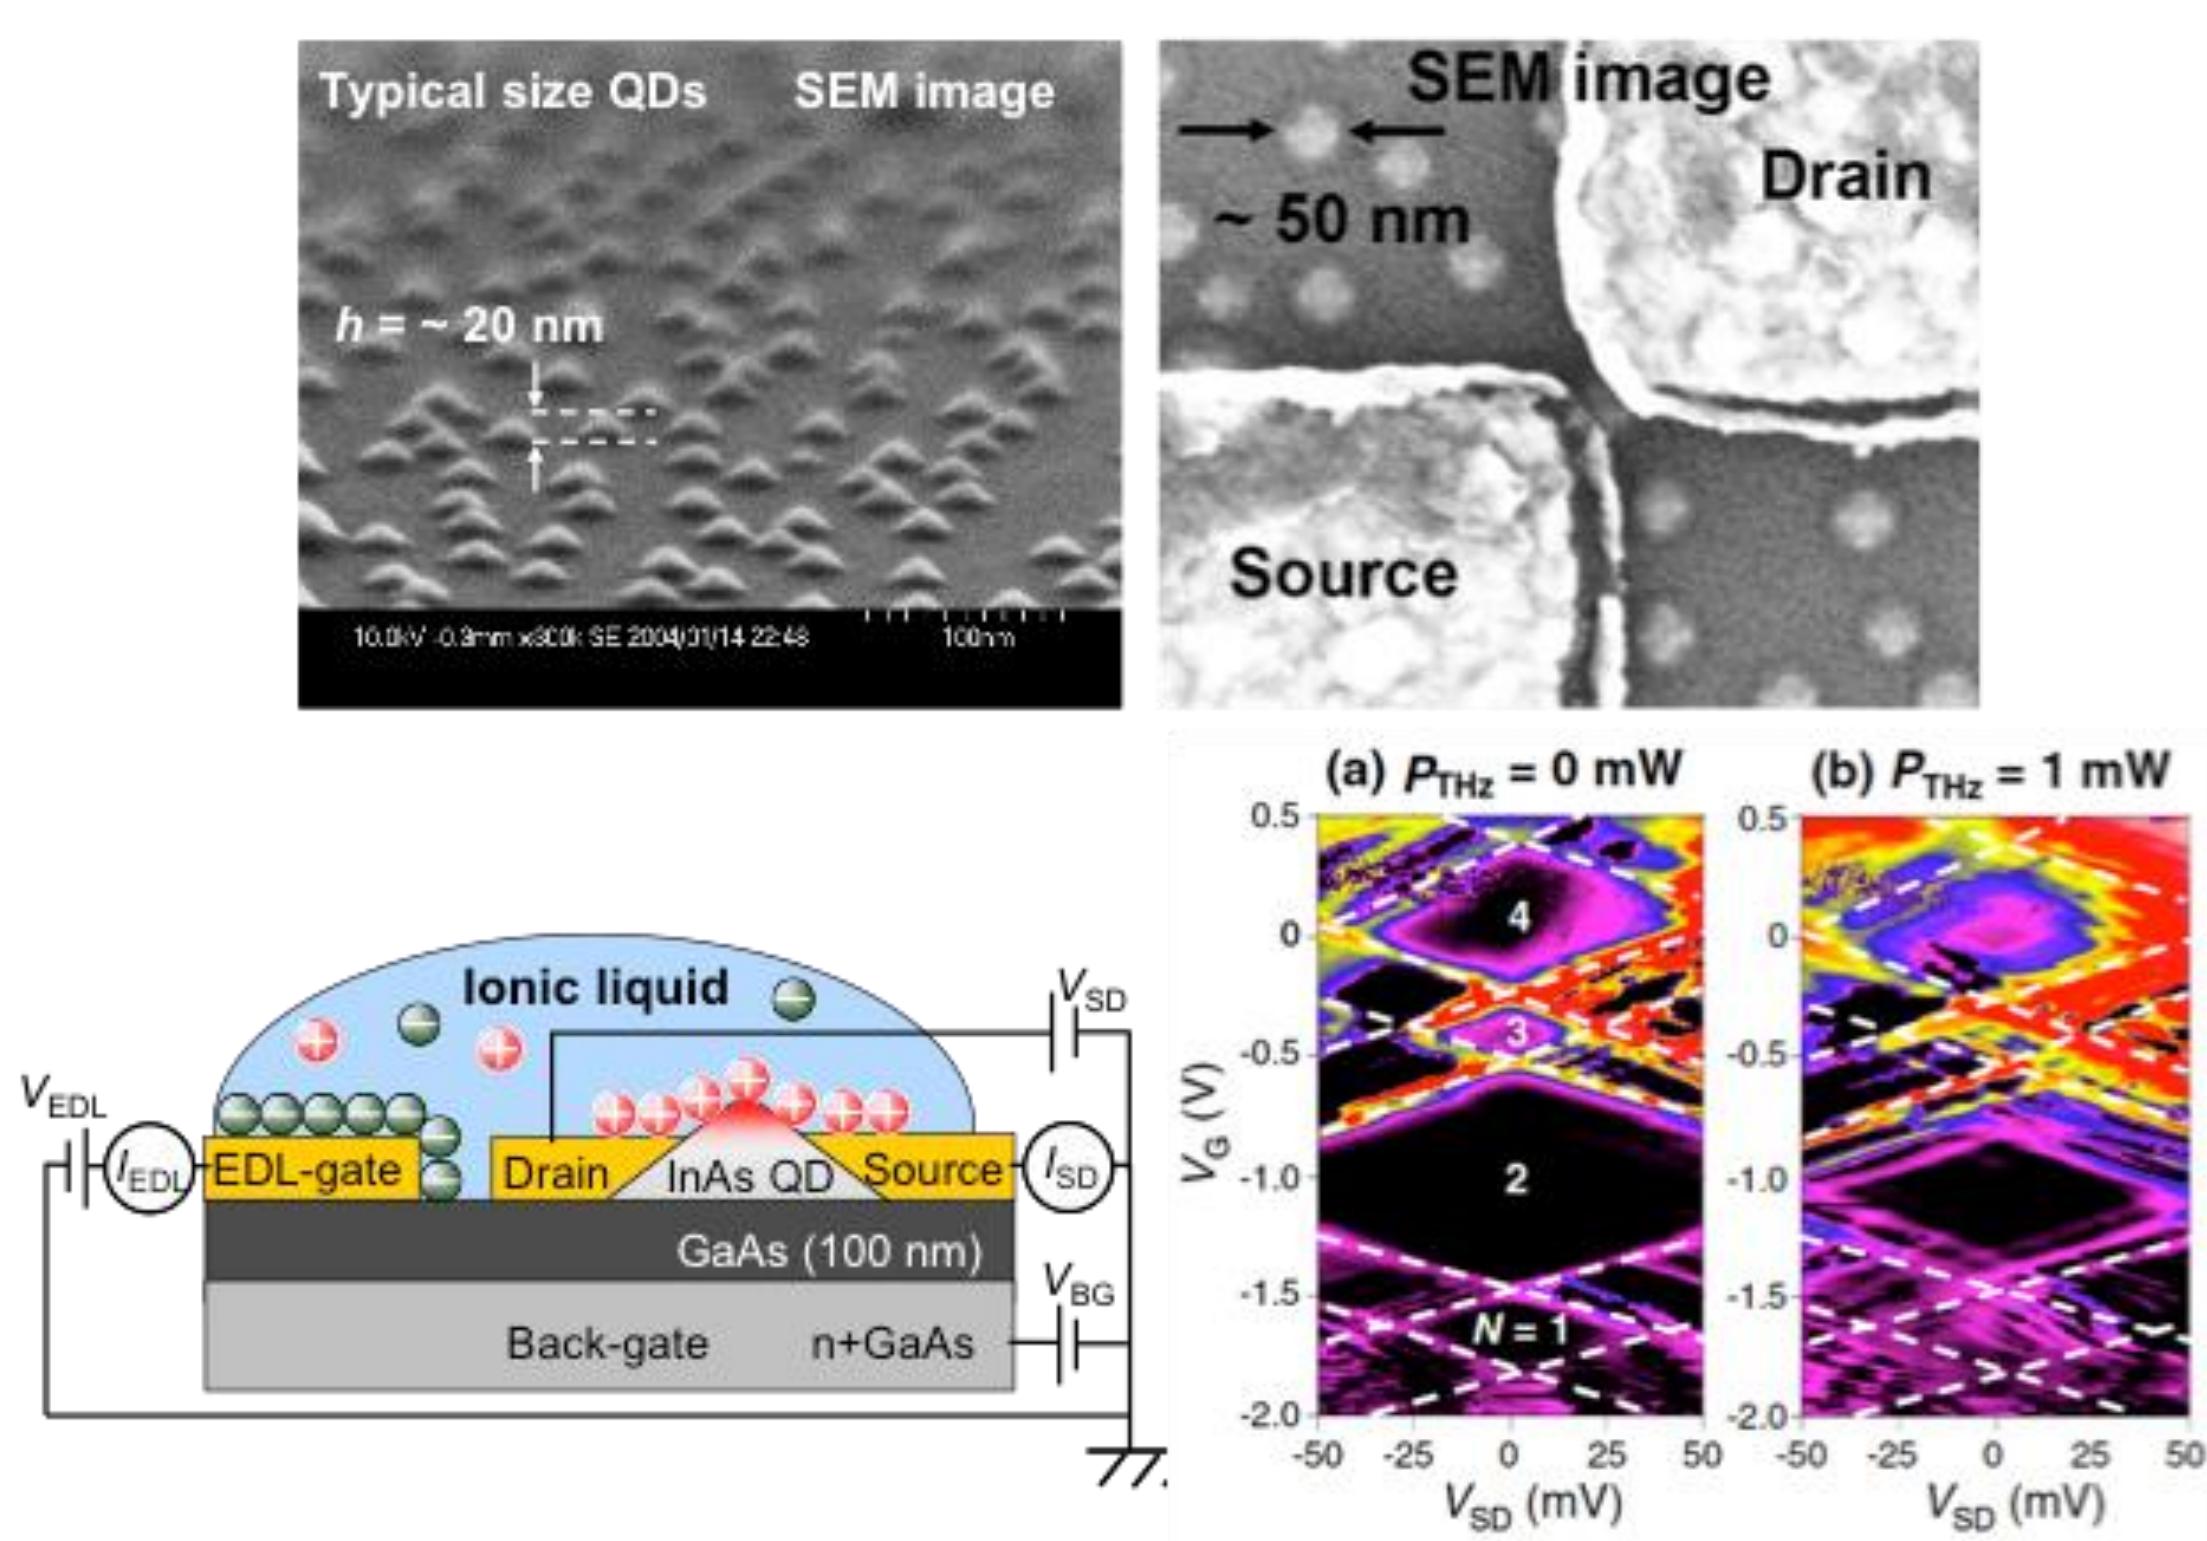

Bloch oscillation in semiconductor superlattices and its application to THz oscillators

Fabrication of atomic-scale nanogap electrodes and single molecular transistors

Physics and applications of single quantum dot transistors

Development of uncooled, high-sensitivity terahertz detectors using MEMS resonators
