Associations of Port Cities

Recently port regeneration has become a popular subject in urban planning since many port cities started investing in other alternatives to improve declining port areas. For that reason Port cities' associations were established in order to exchange information on regeneration projects as an attempt to overcome the current critical situation. This research focuses on the study of this network of associations and introduces some projects. The aim of the research is to find solutions that might contribute to the situation of port cities in Japan.

- ◆ The examples of association of ports cities
SUDEST (Napoli) / IONAS (Venice) / CTUR (Napoli) / RETE (Venice)

- ◆ The examples of regeneration project of ports cities
Napoli (Italy), Lisbon (Portugal), Porto (Portugal), Trieste (Italy)
