---

**Y-Lab contributes to the society by understanding of climate and water cycle.**

We study the Earth from viewpoints of climate, water, and isotopes to make contributions to understanding of climate system and prevention of water-related disasters.

---

**Where we are**

Y-Lab is located in the LEAP of Institute of Industrial Science in Kashiwa campus.

**Office**
There are some opportunities which Y-lab members can gather and discuss intensively.

**Reception Space**
Lab members often take a rest and chat with others here.

**Open Campus**
Visualization of water cycle with spherical display helps visitors understand research topics.

**Isotope Experiment Room**
Y-Lab is fully equipped with experimental instruments including mass and laser spectrometers.

---

**What we do**

**Climate**

Integrated Land Simulator (ILS)
Developing a snow alga model to reconstruct blooming worldwide

Provision of useful information for climate change through understanding climate system using model development and its application

**Water Cycle**

Real-time numerical flood prediction by “Today’s Earth” system
Estimation of local precipitation based on numerical simulation with AI

Contribution to world water resource management and disaster mitigation through representation and prediction of water cycle based on model development and its application

**Isotope**

Modelled δ¹⁸O in precipitation and comparison with data (MIROC-is)

In the past climate (~6,000 years ago)
In Antarctica (2003)

Development of methods for climate reconstruction and improvement of model accuracy with isotope and seeking better understanding of climate system
