Functionalization of Molecules

The discovery and elucidation of new electronic structures are important not only for pioneering frontier science but also for developing new functions. Since metal complexes have various electronic structures, coordination chemistry is promising for designing electronic properties. We aim to create novel functions of organic-inorganic hybrid compounds in terms of coordination chemistry, photochemistry, and spin chemistry.

Chemistry of Photofunctional Molecules

Chemistry of Biofunctional Molecules

Homochirality of Life : A Magnetic Answer

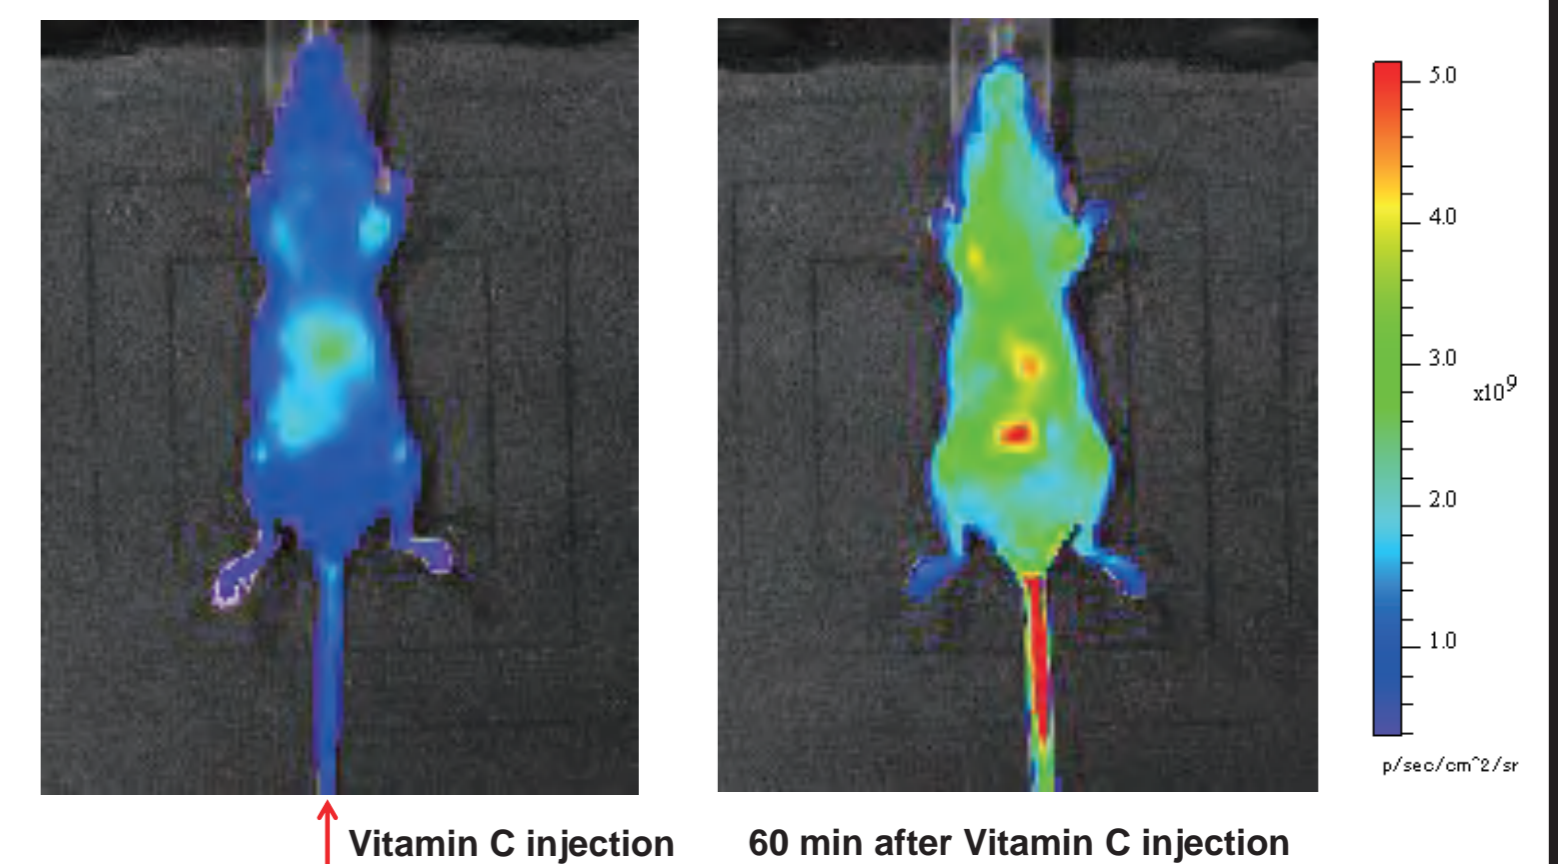

Magneto-Chiral Dichroism of Organic Compounds

Photocontrol of Magnetic Properties

Photocontrol of Radical Spins

Fluorescence Probes

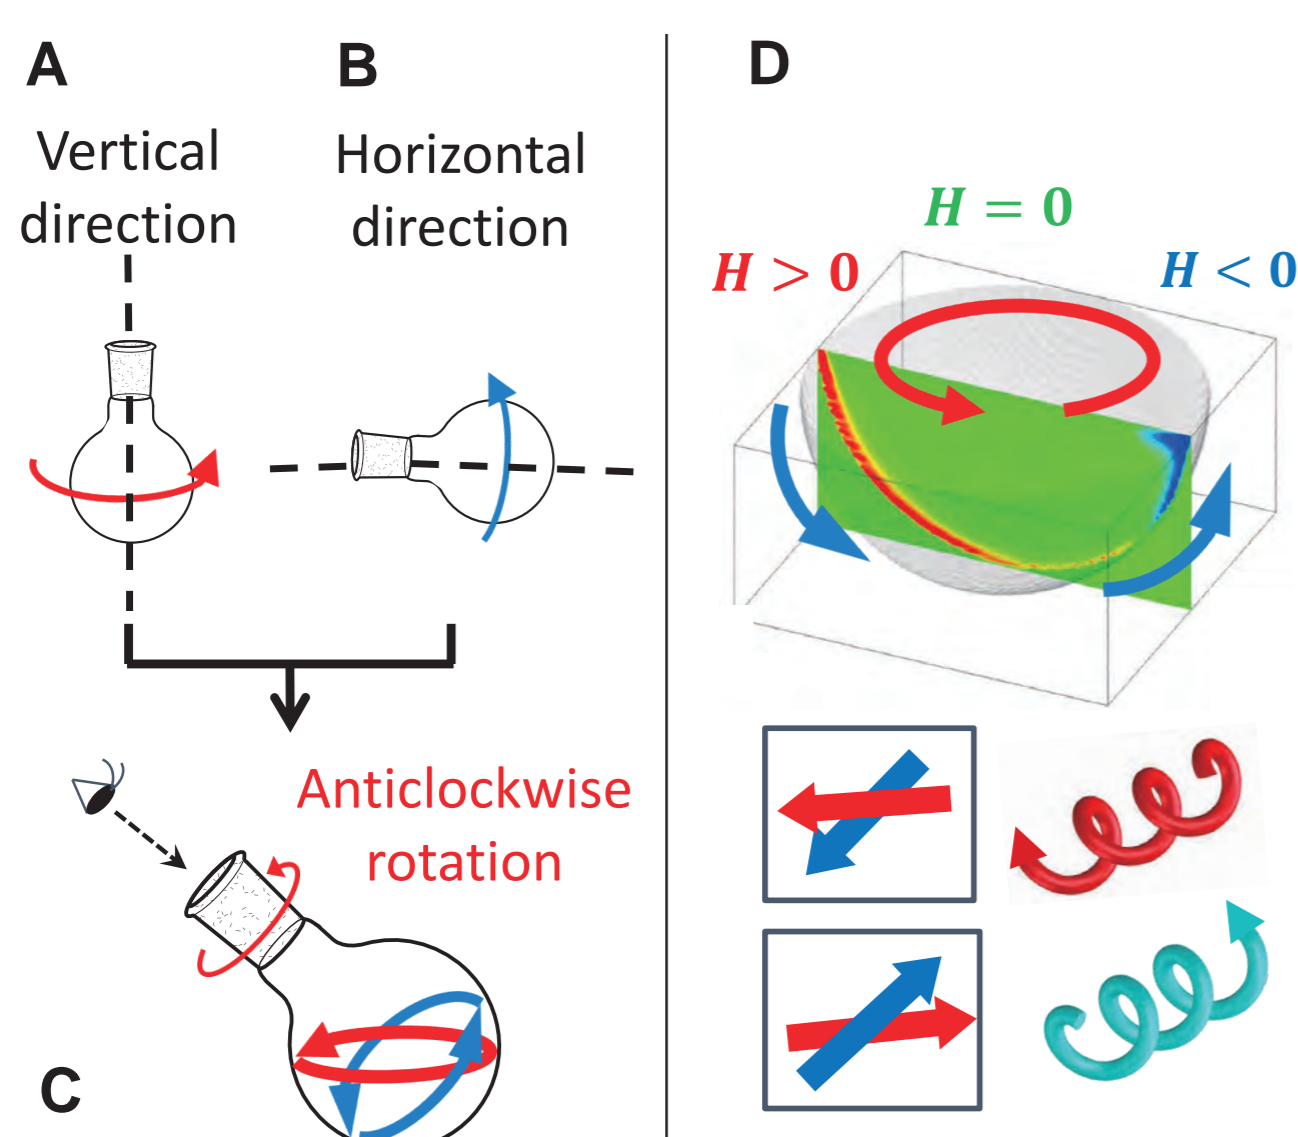

Fluorescence Bioimaging of Vitamin C in a Mouse

Spectroscopic Molecular Detections in Bacteria

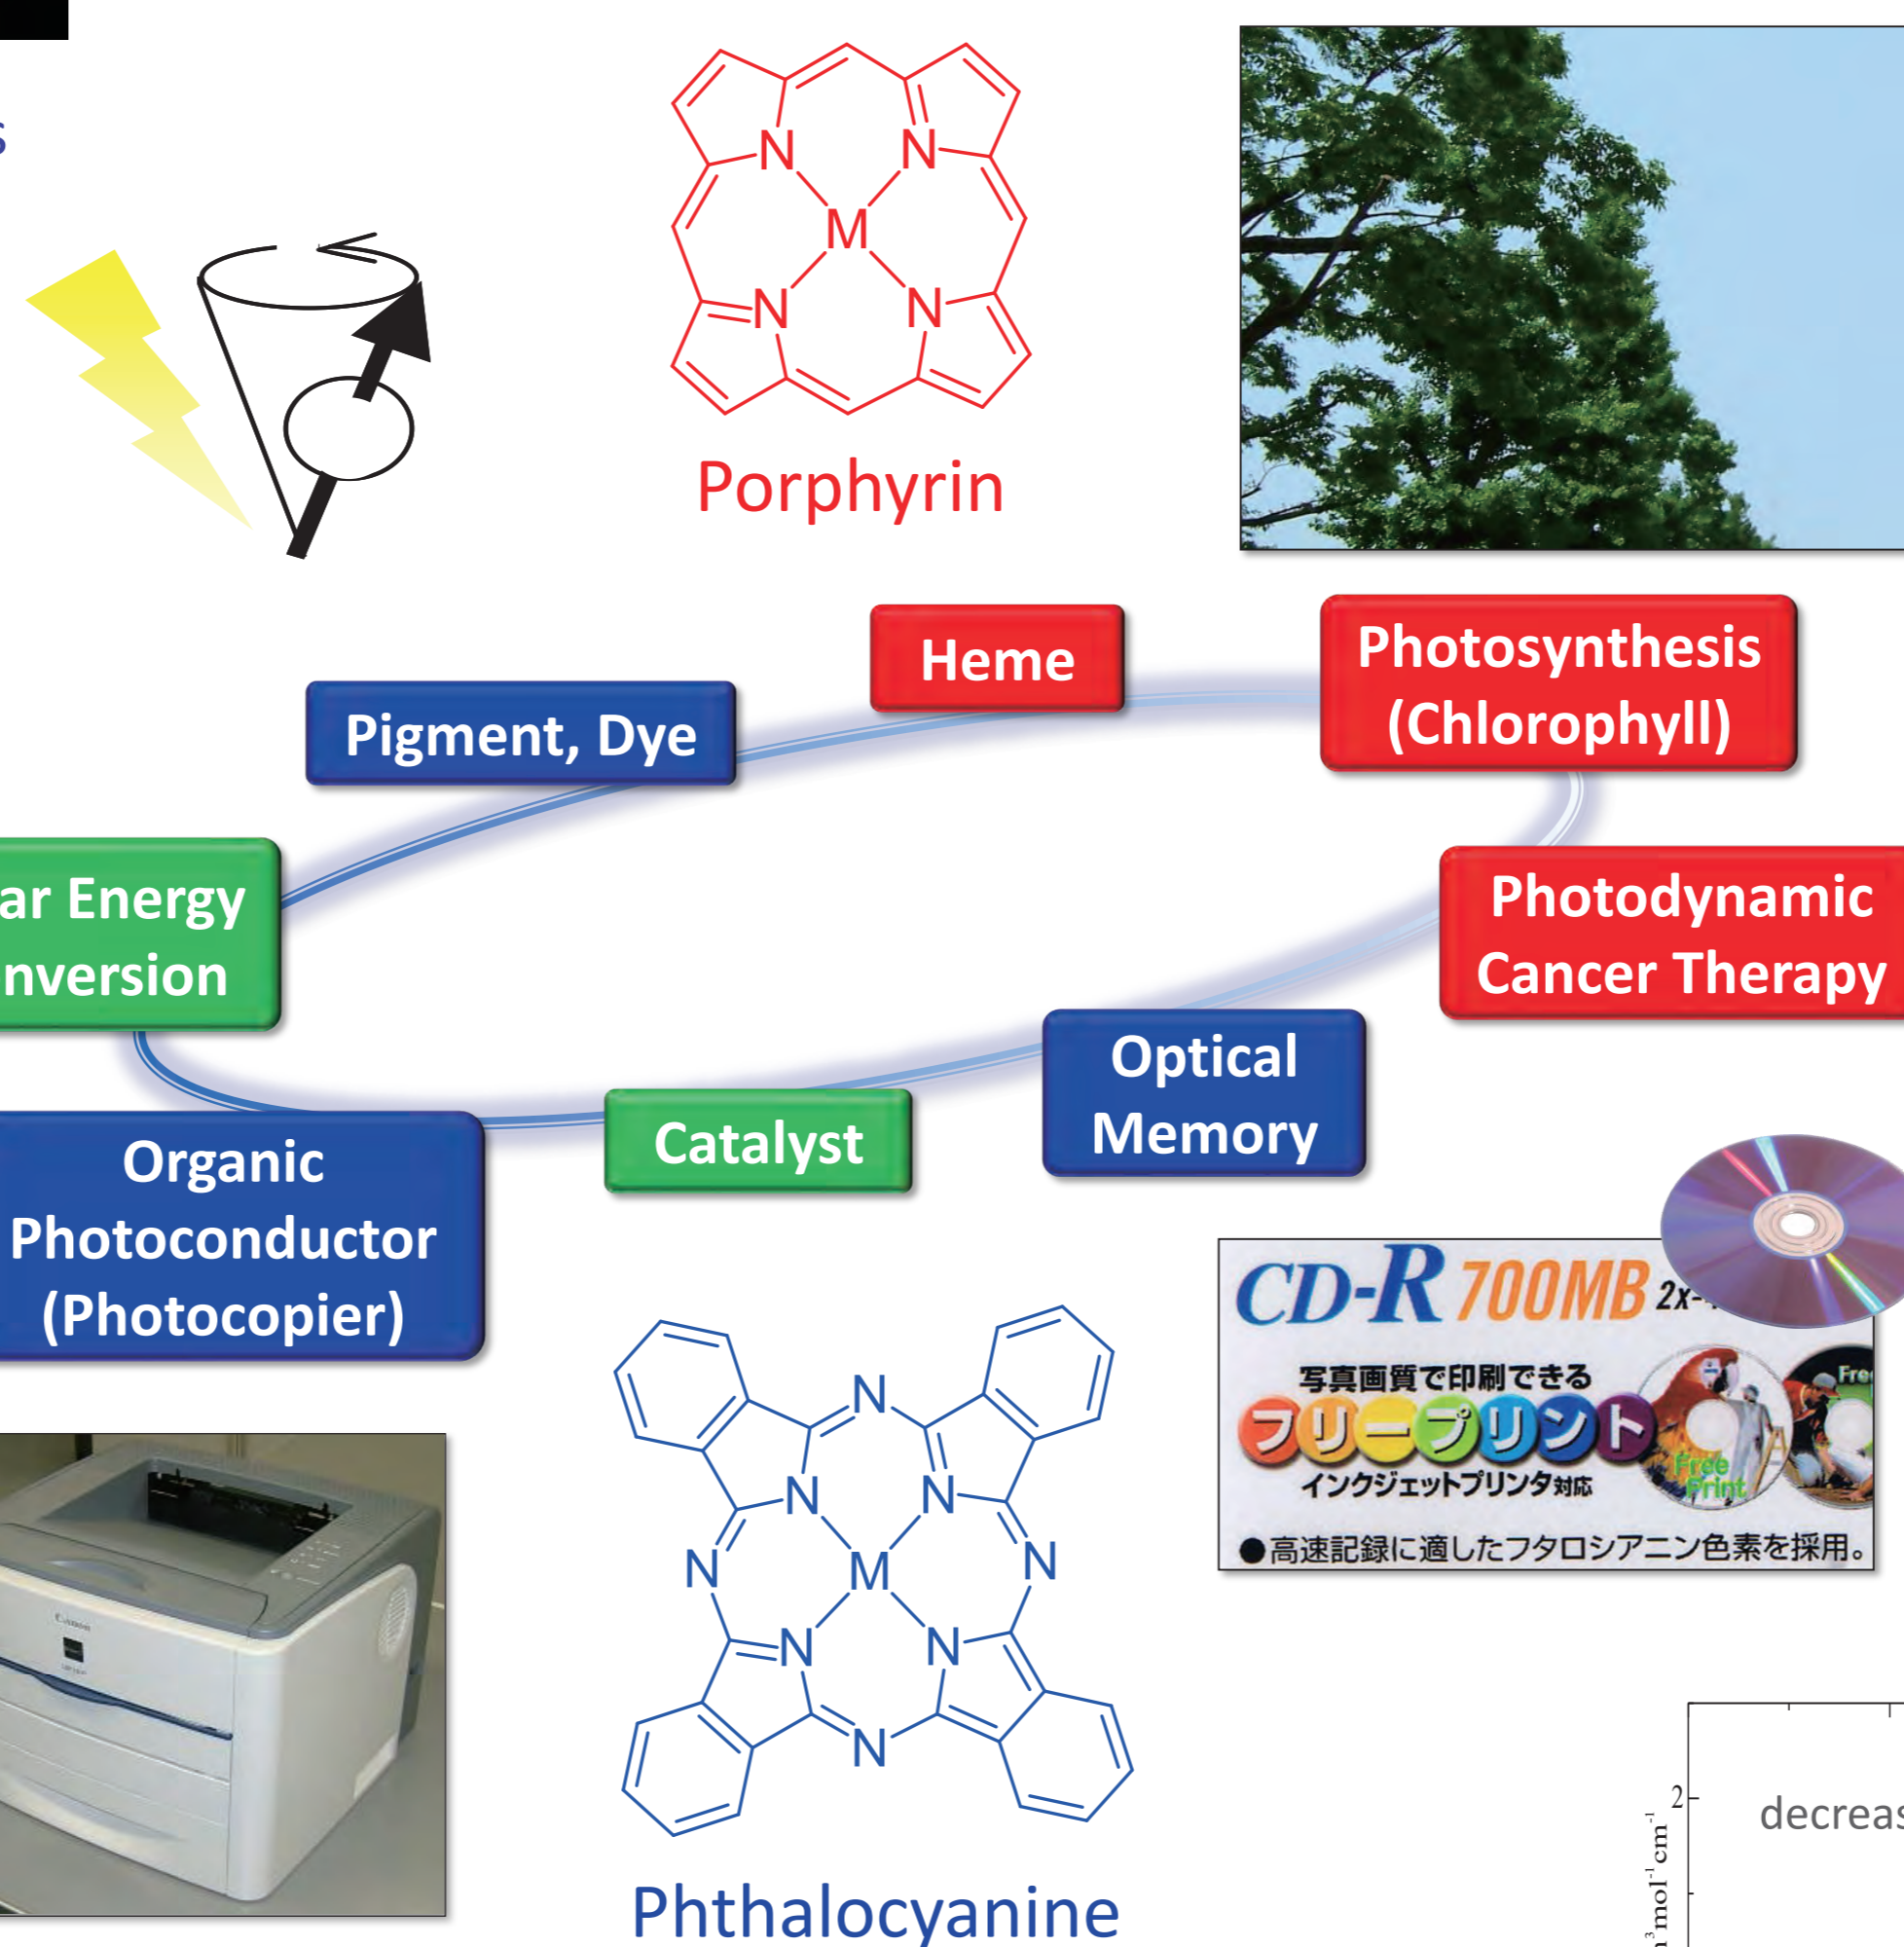

Spectroscopic Observations of Cytochrome c in Bacteria

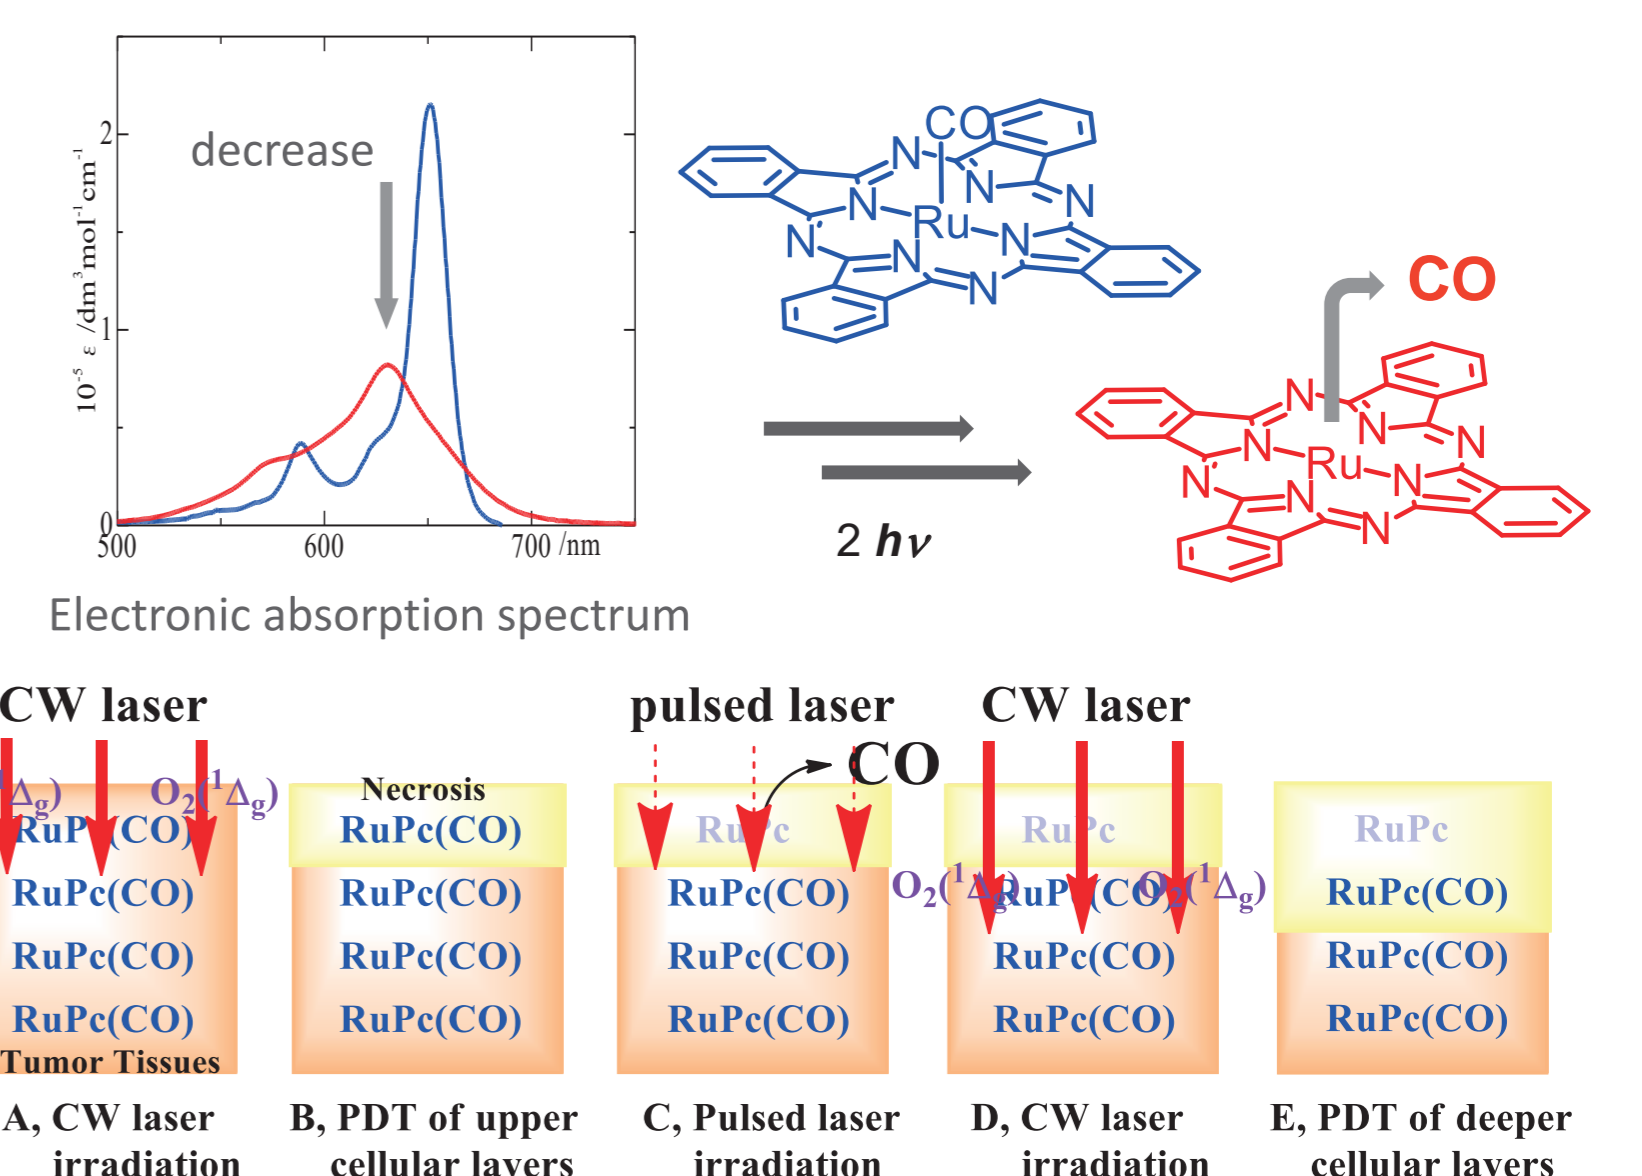

Mechanical Control of Chirality

Preparation of Chiral-Aggregates Using a Rotary Evaporator

Photodynamic Cancer Therapy (PDT)

PDT of Deeper Tumor Tissues

Molecular Magneto-Optical Materials

Molecular Magnetic Hysteresis at Room Temperature
