Development of a new future through the creation of new value from intellectual property (IP)

Intellectual property (IP) is the key to implementing technologies and ideas into society.

IP connects people, creates new opportunities (places), creates new knowledge, and builds a new future.

We take the perspective of IP in the site of cutting-edge research areas and consider how to protect IP for value creation.

- Protection of IP for social implementation of advanced technologies
- IP creation and utilization strategies in the value creation process
- Designing collaborative creation with IP at the core
- IP strategy in the collaborative creation
- Fostering researchers and engineers with an IP perspective
