

Nikon Optics & Precision Frontiers Research Program

[Bridging University and Industry]

Industrial Optics

<https://www.optics.iis.u-tokyo.ac.jp/>

Human resources development in the field of optics
and creation of research themes

This program aims to develop human resources in optics-related fields and create new research themes through industry-academia collaboration.

In education, it offers lectures on optics that are directly relevant to industry for both undergraduate and graduate students. In response to increasingly diverse social issues, new value must be created and integrated into society. We promote the fusion of optics and precision technologies with insights from other fields by leveraging the extensive knowledge and resources of IIS, U-Tokyo. Through industry-academia collaboration, we aim to identify the values that society will require in the future and develop research themes that contribute to long-term advancements.

Lecture "Advanced Optical Engineering"
at Graduate School of Engineering

**Consortium on Education and Research
on Advanced Laser Science (CORAL)**

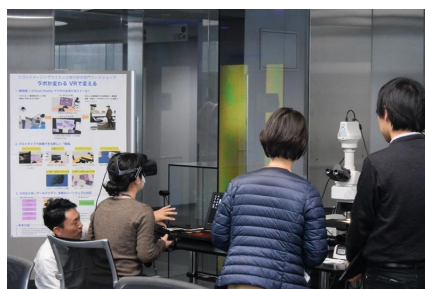

**Science School
at Komaba Research Campus Open House**

ONG Event "Traveling Lecture"
at Saitama Prefectural High School

**Industry - University collaboration
workshop "Lab Changes with VR"**

**Symposium
"The Future of Seeing"**
