Statement

Every year, natural disasters such as earthquakes, storms, and floods occur worldwide, and many lives and property are lost. And we are facing a situation where we have no choice but to face these disasters in total war. Therefore, as a new educational service for disaster management and human resource development research in a new phase, DMTC transcends the framework and organization of self-help, mutual assistance, and public assistance and aims to complement and cooperate in a cross-sectional and systematic manner. By researching and learning about countermeasures, we will train human resources who can play an active role in various sectors. By promoting the accumulation of research knowledge on disaster risk reduction (DRR), we will contribute to developing disaster countermeasures by various stakeholders such as governments, companies/organizations, and residents. DMTC will also cooperate with the Graduate School of Interdisciplinary Information Studies (CIDIR).

Vision: For Resilient Future

We aim to realize a future that can support each other's lives by fostering and implementing DRR for individuals and society in response to natural disasters.

Mission: Change the Social Mind

We contribute to protecting more lives from disasters and keeping a sustainable society to change people's consciousness by providing systematic and practical training programs on disaster preparedness.
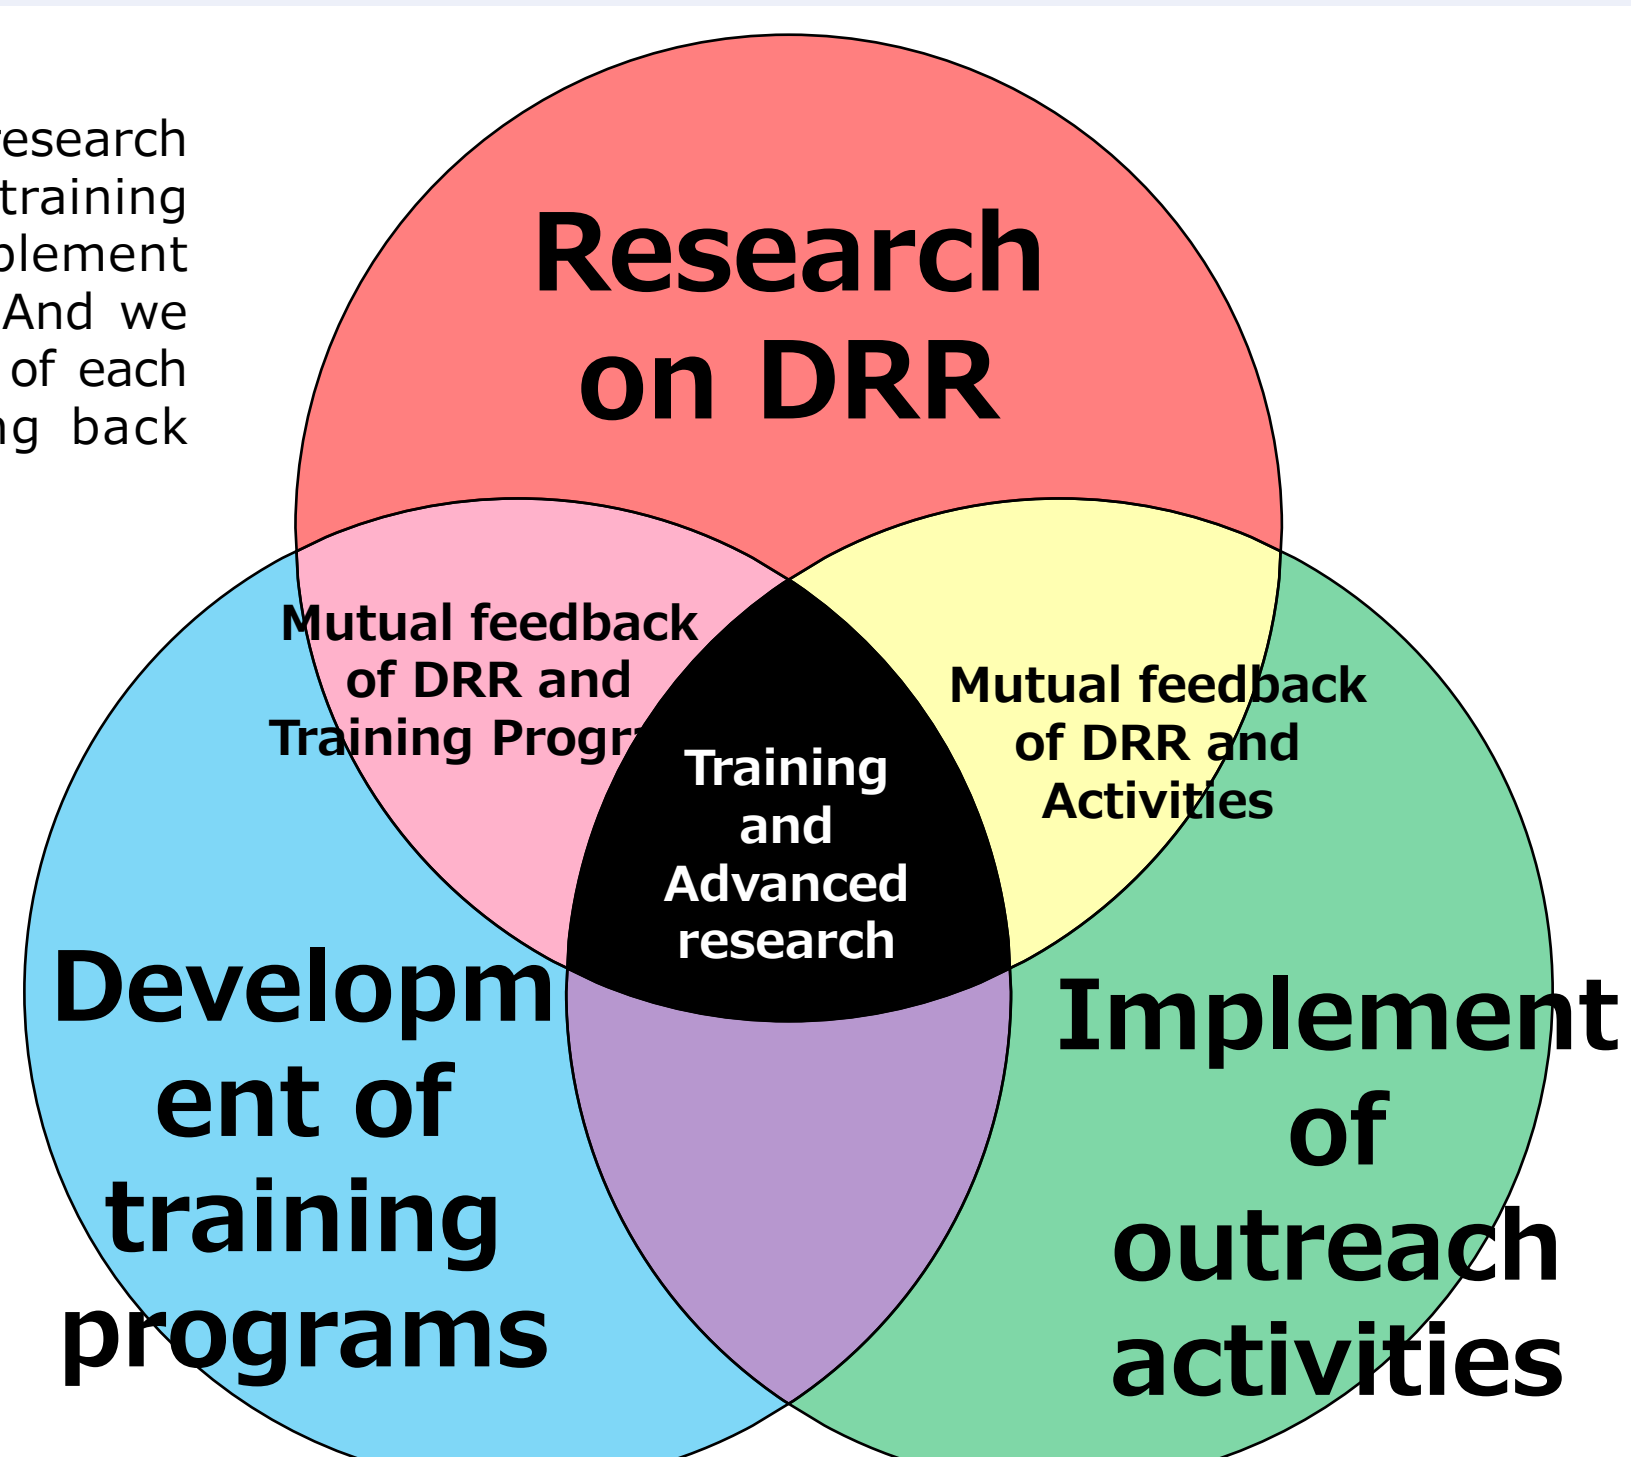

Activity policy: For all Students

We will promote research on DRR and training methods for our students to acquire knowledge, skills, and know-how through practical training.

Activity effect: Effect to the Society

We will train the students who can contribute to solving various social issues based on the concept of prevention in homes, communities, workplaces, etc.

Accumulation and sharing of "knowledge."

DMTC is a place to learn, experience, interact and think about the future.

Concept of DMTC learning method:
1) **Independent learning:**
  Learn independently based on the situation of the student's area and organization.
2) **Interactive learning:**
  Dialogue with various other people (administration, companies, residents, volunteers, international people) and people in different positions to broaden and deepen one's way of thinking.
3) **Deep learning:**
  Deeply learn the thinking from multiple perspectives and compound eyes, finding problems, thinking about solutions, and expressing and communicating their thoughts.

We will promote research on DRR, develop training programs and implement training activities. And we update the quality of each activity by feeding back mutual results.

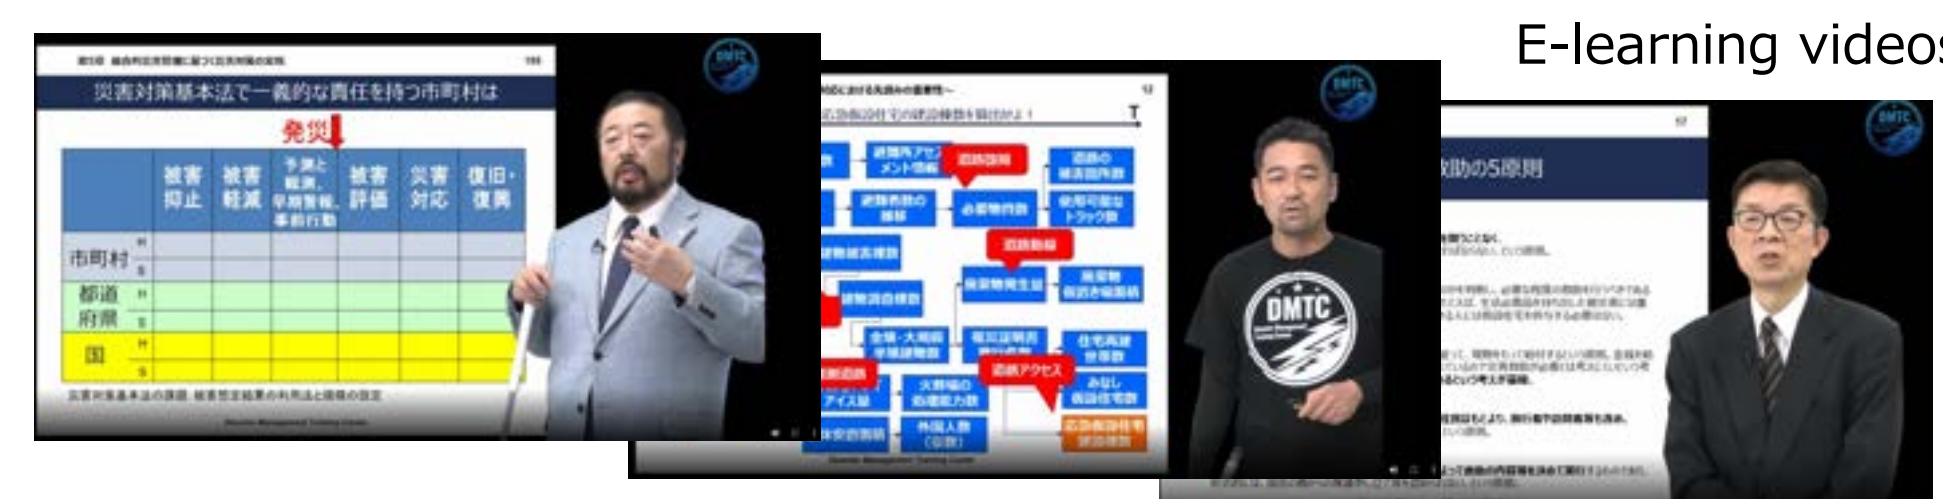

DMTC Training Tools

Student system.

Status of students.

Accumulation and sharing of disaster countermeasure process data.

Training application management, lecture videos, attendance status, report management, completion certificate management, etc.

E-learning videos
