Underwater Information by Marine and Satellite Monitoring

Based on **underwater and satellite observation technology**, We develop **GNSS-A technology** and contribute to disaster prevention engineering, ocean monitoring, fisheries science and others. Our research aims to create new data and discovery of new usages, especially in real-time.

In cooperation with several institutes and researchers, we promote these research topics:

- ① Seafloor geodesy technology called **GNSS-A** & ocean application of GNSS
- ② Earthquake disaster prevention
- ③ Seafloor surveying technology
- ④ Realtime ocean monitoring technology using UAV
